MUHAMMED KHALED ALSAYED

FULL-STACK DEVELOPER

Tripoli, Libya • +218 92 7784849 • muhammedelshreef50@gmail.com
alsayed.ly • GitHub • LinkedIn

PERSONAL STATEMENT

Full-stack developer with hands-on experience building and shipping production web applications, comfortable working on both the front end and the back end. I care about clean, maintainable code and interfaces that are simple to use. I learn new tools quickly, work well in a team, and enjoy sharing what I know with the people I work with.

WORK EXPERIENCE

Full-Stack Developer | Alaman Aljadeed | Tripoli, Libya **Jul 2026 – Present**

Working as a full-stack developer on Alaman Aljadeed's own products, including Aamin (top-up cards and digital vouchers), and on applications for its clients.

Part-Time Front-end Developer | Qader co | Tripoli, Libya **May 2026 – Present**

Working at Qader co on Turista as part of a team modernizing legacy systems by developing a new, comprehensive platform for resort dashboards and building/apartment management. Turista aims to streamline hospitality and property operations, delivering efficient digital solutions for resort and real estate management.

Full-Stack Developer | Tadamon for Libyana | Tripoli, Libya **Dec 2025 – Jul 2026**

Worked at Tadamon Company as an outsource developer for Libyana, contributing to the development of LibyanaHub, a comprehensive e-learning and fitness coaching platform. LibyanaHub aims to empower Libyan users with access to online courses, professional fitness coaching, and educational content, supporting both Arabic and English to serve users across Libya.

Front-end Developer (Internship) | Mataa | Tripoli, Libya **Jan 2024 – Apr 2024**

Worked at Mataa Company as part of a team developing the company’s dashboard. Mataa is the largest shopping application in Libya, specializing in providing original products from renowned international brands. Their goal is to offer the best shopping experience to customers across all Libyan cities.

PROJECTS

LibyanaHub Platform

- A comprehensive e-learning and fitness coaching platform for the Libyan market. Features course enrollment, fitness coach subscriptions with tiered pricing, admin dashboard, and full Arabic/English bilingual support with RTL layout. Built with Angular, TypeScript and PrimeNG.

LibyanaHub Collab (Tadawee)

- A core module of the LibyanaHub platform, built in collaboration with medical students to track and monitor patient health. Features patient record management, medical history tracking, and streamlined communication between healthcare providers. Built with Laravel and Filament.

Records and Statistics System (Libyan government, public sector)

- A registration and reporting system for a Libyan public-sector client, built as a freelancer. Covers 18 admin modules, role-based permissions, an audit log and Arabic PDF reports. Built with Laravel 13, Filament 5 and Pest.

Aamin, Addadi and Alaman Aljadeed Websites

- Bilingual marketing websites for Alaman Aljadeed and two of its products. Arabic-first with a full RTL layout and an English version of every page, built with Nuxt 4 and generated as static pages.

Aamin UI Kit

- An Arabic, RTL-first design system for dashboards: ready-made layouts and components that other projects install from a shared registry. Built with Vue 3, TypeScript, Tailwind CSS 4 and shadcn-vue.

Orders Management System

- A full-featured business order and invoice management system covering the complete order lifecycle. Includes customer/product management, invoice generation with PDF export, partial payment tracking, and a real-time financial analytics dashboard. Built with Laravel, Filament and Livewire.

Elzwetina Group

- Corporate website for Libya's leading industrial and safety solutions provider. A full-stack Laravel app with product showcase, brand partnerships, client portfolio, contact system with email notifications, and a Filament-powered admin panel.

Libya Roots

- Tourism platform showcasing Libya’s culture and historical landmarks. Users explore categorized destinations, view locations on maps, and save favorites. University project (ITGS303), built with Angular.
